

## Refillable Beer Bottle Stacking

Please stack your refillable beer bottles in cases, flats, or boxes on a pallet

This is the IDEAL way to stack REFILLABLE BEER BOTTLES. We recognise that this 'ideal' will likely NOT BE PERFECT or POSSIBLE when you are doing a bottle drive. Please do the best that you can.

View of the pallet from above:

**Instructions:**

We ask that you please TRY to have bottles in 12 packs on the corners of the pallet, if you can.

Typically: A full layer is 288 bottles.

Fill in the rest of the pallet THE BEST YOU CAN with various sized cases (4, 6, 12, 15, 18, 24 pack cases).

Stack loose bottles in the boxes provided or on beer/pop can flats.

If you run out of beer boxes, put the remaining loose bottles in ANY TYPE of available box.

We are giving out a BUNDLE OF BOXES to help you stack refillable beer bottles.

- This BUNDLE OF BOXES are 6 inch high, flattened brown cardboard boxes that will fit 24 LOOSE BOTTLES in each box.

You will also need to use the cases that you receive the beer bottles in, and possibly, in addition, pop/beer can flats or other boxes. Take NON-REFILLABLE bottles out of their boxes/cases and replace them with REFILLABLE bottles.

Please DON'T stack refillable bottles over 4 layers high.

**REFILLABLE Beer Bottles** typically have a SCREW TOP (do not need a bottle opener to open them).

Common Examples: Budweiser, Molson, Growers Ciders, Coors, Labatt Blue. Picture of refillable bottles below:

Refillable bottles are returned to breweries for REFILL, and thus need to be HANDLED DIFFERENTLY. Please do not put 'Refillables' in MEGA bags. The glass that goes into the MEGA bags is handled differently and goes directly to processors to be crushed. Glass is difficult and dangerous to remove from mega bags. Staff could face severe cuts to their hands if they have to remove the Refillables.
